Abstract of the Disclosure

10 A computer network connects a personal computer system to a content delivery
system for delivering digital content to the personal computer. The personal computer
comprises a disk drive which includes a network address for the content delivery system
and a server-contacting program. The disk drive comprises firmware installed during
manufacturing of the drive which initiates execution of the server-contacting program to
enable the network connection and facilitate delivery of content to a large number of
15 personal computers.
